

DSI OFFENDER MANAGEMENT SYSTEM

#1 Jail Management Software in the United States

The **DSI Offender Management System (DSI OMS)** is a comprehensive inmate management system that puts inmate data within your reach. The system is built on open technology that allows integration with other systems to provide single point of entry, but also allows individual ownership of data.

The DSI Offender Management System was constructed on a modern web-based platform allowing the user to access the system from any network attached workstation. The DSI OMS is so flexible that it can even be accessed from a home office enabling our users to control their facilities without boundaries. The DSI OMS takes managing offenders to a whole new level by allowing the administrator to control the facility without having to go to each individual desktop.

From intake to release, information on all aspects of an inmate's incarceration are maintained - including initial intake, charges, sentencing, property, housing, medical, meal planning, scheduling, and temporary release to name a few. For increased security, the DSI

Offender Management System utilizes digital biometrics to positively identify inmates, increasing accuracy in inmate movement, housing, release, etc. Plus, built-in reports that interface with Crystal Reports make accurate reporting easy.

All DSI - ITI, LLC products are created with the direct input of corrections industry professionals. DSI Offender Management System users are invited to participate in our annual User Group meeting, giving them direct input into the development of the application. This input ensures that the DSI OMS is the most up-to-date and corrections focused offender management software available.

Global Tel*Link is the authorized sales representative for products of DSI - ITI, LLC.
