

Digital Solutions/Inmate Telephone, Inc.

## Digital Imaging

DSI's Digital Imaging System is a multi-purpose tool for capturing visual information and evidence.

Digital Imaging can be used in correctional facilities for the collection of inmate mugshots and for documenting scars, marks, tattoos, and other distinguishing characteristics. Multiple images per view can be captured for chronicling appearance over time.

Create custom databases to store information and images for other uses—missing children, staff ID badges, visitor identification, inmate cell damage, etc.

Once an image is captured, the built-in Output Layout Editor allows you to create custom designs for presenting images: Photo Warrants, ID Bracelets, ID Badges, Inmate Lineups.

Digital Imaging is the most versatile imaging system available for corrections. The ability to capture multiple views (and multiple images of each), design custom output, maintain custom databases, and use a wide variety of digital cameras, makes DSI's Digital Imaging the right solution for you.

The DSI Digital Imaging System was developed using the direct input of correctional facilities, allowing us to design an application as end-user oriented as possible.

### Customization

Custom databases can be created to capture virtually any type of image desired. System Administrators can create and maintain multiple databases, designate the image views to be captured, configure the screen set-up, and develop search criteria. The possibilities in creating databases are limited only by your facility.

### Output Layout Editor

Users can design and produce just about anything based on input. Users can extract data and interface with any ODBC compliant database. Administrators can create templates using graphics, bitmaps, logos, barcodes, pictures, and other visual design elements.

### Camera Options

Digital Imaging offers many camera options. Stationary cameras can be mounted in designated areas or handheld cameras can be used. Each camera option offers unique benefits and DSI can help you determine what best fits your needs.

### Image Collage

For users who require side-by-side comparisons of images, Digital Imaging has a built-in collage feature that can be used to create inmate lineups, missing children reports, etc.

### Features & Capabilities

- Captures Photographic Quality Images
- Produces Mugshots, Digital Lineups, Wristbands, Badges, and Other Forms of Custom Output
- Maintains Multiple Custom, Searchable Databases
- Captures and Stores Multiple Views for Each Record
- Stores Multiple Time-Stamped Images for Each View
- Exports Images into Several Industry Standard File Formats

### Possible Uses

- Inmate Identification
- Scars/Marks/Tattoos ID
- Employee Identification
- Visitor Identification
- Juvenile Identification
- Digital Lineups
- Photo Warrants
- Adult Parole ID Cards
- Gun Permits
