Probation and Parole

DSI's Probation and Parole Management System (PPMS) provides complete case management for your county's adult and juvenile probation office or offices.

Whether your county maintains separate offices for juveniles or adults, or maintains one office, PPMS protects your data and the privacy of your offenders.

PPMS features five major modules: Offender Case Management, Home Monitoring Module, Chronological Case Notes, Fines and Costs, and Community Service.

Each module maintains comprehensive offender information and automates reporting to reduce the amount of time you spend on paperwork.

An additional Digital Imaging module can be used to attach digital images to records to help authenticate information.

PPMS is perfect for standalone offices, yet it can be used to provide seamless integration and data-sharing throughout an entire county's criminal justice system.

PPMS provides comprehensive adult and juvenile case management throughout the offender's probation and parole life.

Community Service

The Community Service module manages an offender's community service information as service hours are completed. The module tracks an offender's total hours and automatically calculates hours remaining each time newly completed hours are recorded. In addition, comprehensive work site and contact information is maintained for each community service assignment.

Chronological Case Notes

Users can design and produce just about anything based on input. Users can extract data and interface with any ODBC compliant database. Administrators can create templates using graphics, bitmaps, logos, barcodes, pictures, and other visual design elements.

Home Monitoring

PPMS's Home Monitoring module works in connection with a third-party home monitoring provider. The Home Monitoring module in PPMS keeps track of all pertinent offender information: Equipment Types, Cohabitants, and Equipment Costs.

Additional Features

- Full Reporting Capability
- Case/Episode Log
- Intake Schedule
- Intake History Check and Record Restoration
- Robust Background Information Manager
